

The Art of Location: New Trends in Public Safety

Key takeaways

Historical incident modeling powered by location data can help agencies better predict resourcing needs with greater precision

Local agencies can **enhance collaboration with federal agencies** by sharing localized incident data (e.g., 911 calls) with layered on top of location data

Open standards not only make innovation possible in the private sector, they facilitate groundbreaking knowledge transfers (e.g. hospital bed availability) for use in preparing for a multitude of incident types

Extensible open APIs and a common platform can accelerate the adoption of edge-cloud computing to further enhance situational awareness
